

Adams Green Transportation Improvement Project

Will this project address the circulation issues at the Hancock Street/Quincy Center MBTA Busway Intersection?

Yes, this project includes the installation of a fully actuated traffic signal at this location, which will be coordinated with the existing traffic signal at the Hancock Street/Adams Street/Dimmock Street/Johnson Avenue intersection. A new traffic signal along with lane striping and directional signing will eliminate the existing conflicts between motorists, pedestrians, cyclists, buses, and taxis, and will facilitate safe, more efficient access to and from the MBTA station for all transportation modes.
